Introduction

The 1984 growing season marked the second year of operation for our Princeton Plant Disease Diagnostic Lab located at the Research and Education Center in west Kentucky. The Princeton facility serves twenty-four counties in three areas (Pennyrile, Green River and Purchase). During 1984 the Princeton lab handled 869 specimens. The Lexington Plant Disease Diagnostic Lab, which services the 94 counties in central and eastern Kentucky, processed 3503 samples. The diseases and disorders evident on the 4372 total specimens examined by the two labs are summarized in the following pages.

This year, unlike previous years, we compiled our summary using both the primary and secondary diagnosis entries in our computer database (see also "Explanatory Remarks"). We feel this gives us a more complete picture of the problems actually observed in the lab. More than one significant problem (i.e. at least two diagnoses) was evident on nearly 10% of the specimens examined.

Highlights

Highlights of some of the disease problems observed in 1984 are given below:

Apple scab was once again severe, particularly on unsprayed apple and crabapple trees. This marked the second year in a row that scab infections resulted in heavy defoliation by early to midsummer.

Anthracnose was a common problem, particularly on maple and ash. Twig infections, uncommon during most years, were frequently observed on maples. The resulting dieback was often confused with dieback resulting from winter injury. Other usually hardy woody plants, such as spruce and apple were also damaged by winter kill. After consulting with horticulture specialists, we came to the conclusion that a combination of the 1983 summer drought and a sudden, rapid drop in temperatures to subzero levels after a mild fall were involved in winter damage to these plants.

The entomologists were not the only ones impacted by the large aphid populations observed in 1984. The Plant Disease Diagnostic Labs received large numbers of inquiries (samples and phone calls) regarding the "sticky substance" that homeowners observed on their landscape plants. This abundance of honeydew provided plentiful food supplies for the sooty mold fungi. Aphid activity was also responsible for an increase in the incidence of certain virus diseases. Garden bean samples with bean virus complex numbered 42 (compared to 16 in 1983). Tobacco samples infected with viruses increased from a mere 17 in 1983 to 139 in 1984!

A number of bacterial diseases were common on various vegetable crops. Bacterial hollow stalk of tomato, previously referred to as "bacterial stem rot", increased in incidence in 1984. Reports from other states indicate that Pseudomonas is the likely cause. We also saw an increase in samples with bacterial wilt on tomato and bacterial spot of pepper. Samples of black rot of crucifers and bacterial wilt of cucurbits remained high for a second

year in a row.

Soybean growers in the Integrated Pest Management (IPM) program received an offer they could not refuse: Soybean cyst nematode analyses (normally a bargain at \$5.00/soil sample) were offered free for soil samples collected from IPM fields currently (1984) in soybeans. This tremendous offer helps account for the unusually high number (715) of soybean cyst nematode soil samples processed in 1984 compared to 1983 (182).

Explanatory Remarks

As you examine the main body of this report, you will notice three columns of numbers following the diagnosis and causal agent sections. The first column indicates the number of primary diagnoses, the second column the number of secondary diagnoses and the third column is the total of the previous two. The "primary diagnosis" is the main (or frequently, the only) problem observed on a plant sample. If a second problem of equal or less importance was observed, it was entered as the "secondary diagnosis". Occasionally, a problem may have only been diagnosed as a secondary problem, and never as a primary problem (e.g. pod and stem blight on soybeans). In these cases, a hyphen (-) is used in the "primary diagnosis" column to indicate the absence of samples with that particular problem.

No disease: This indicates that no pathogen was observed on the specimen submitted, and that we were unable to pinpoint an exact abiotic or biotic cause of the problem, based on the sample and the information provided.

Referrals and consultations: Insect problems were generally identified or verified by a specialist in the Entomology Department. Chemical injury on all commercially grown crops was diagnosed by the Weed Control Specialist in the Agronomy Department or by the Crop Specialist in the Agronomy or Horticulture Departments. On a number of occasions we consulted with crop specialists in other departments to diagnose or verify specific abiotic problems, as well.

Root problems: Samples designated as having a "root problem" had top symptoms suggestive of root dysfunction and/or evidence of root degeneration, however, a biotic or abiotic cause could not be determined.

Acknowledgements

We wish to thank Freddie A. Higgins for his computer programming expertise and Donna Black for typing portions of this report. Joann Eason and Sharon Kester deserve special recognition for processing what must have seemed like an endless number of soil samples for soybean cyst nematode.

We would also like to thank all the College of Agriculture Extension Specialists and researchers who served as consultants to the Diagnostic Lab during 1984. Their services ranged from making actual diagnoses to providing answers to plant or pesticide questions. While some of these able consultants may have cringed at the sight of us with dying plant in hand, all were most cooperative. Because these individuals are numerous and any list is likely to leave someone out, we will not mention them by name (you know who you are). We are grateful to each for their valuable assistance.

Table 1. Total diagnoses¹ according to crop category and problem area.

REDBUD (Cercis)

ANTHRACNOSE		1	1
CHEMICAL INJURY		3	3
ENVIRONMENTAL STRESS		2	3
INSECT INJURY		3	3
NO DISEASE, INADEQUATE SPECIMEN		5	5

RHODODENDRON and AZALEA (Rhododendron)

ANTHRACNOSE	- <u>GLOEOSPORIUM</u>	2	2
CANKER & DIEBACK DISEASES			
- <u>BOTRYOSPHAERIA</u>	1		1
- <u>PHOMOPSIS</u>	2		2
- <u>PHYTOPHTHORA</u>	2		2
ENVIRONMENTAL	- STRESS	3	4
	- TRANSPLANT SHOCK	5	5
	- WET FEET	2	2
	- WINTER INJURY	4	4
LEAF & FLOWER GALL	- <u>EXOBASIDIUM</u>	4	4
INSECT INJURY			1
NO DISEASE, INADEQUATE SPECIMEN		17	17
NUTRITIONAL - IRON DEFICIENCY, HIGH PH		7	7
POWDERY MILDEW		2	2
ROOT PROBLEM	- CAUSE UNKNOWN	3	3
ROOT ROTS	- <u>PHYTOPHTHORA, PYTHIUM</u>	2	2

ROSE (*Rosa*)

AIR POLLUTION	- OZONE	1	1
BLACK SPOT	- <u>DIPLOCARPON</u>	2	2
CHEMICAL INJURY, INSECT INJURY		4	4
ENVIRONMENTAL STRESS, CULTURAL		1	4
NO DISEASE, INADEQUATE SPECIMEN		10	10
POWDERY MILDEW	- <u>Sphaerotheca</u>	3	3
ROOT PROBLEM	- CAUSE UNKNOWN	1	1
RUST	- <u>PHragmidium</u>	1	1

SPRUCE (*Picea*)

AIR POLLUTION		1	1
CHEMICAL INJURY		1	1
ENVIRONMENTAL	- COLD/WINTER INJURY	2	5
	- DROUGHT	14	18
	- STRESS	8	8
	- TRANSPANT SHOCK	3	4
INSECT INJURY		6	7
NO DISEASE, INADEQUATE SPECIMEN		17	17
NUTRITIONAL	- CA/MG IMBALANCES	3	3
ROOT ROT	- <u>Rhizoctonia</u>	-	1
ROOT PROBLEM	- CAUSE UNKNOWN	2	2

SYCAMORE (*Platanus*)

ANTHRACNOSE	- <u>Gnomonia</u>	3	3
ENVIRONMENTAL STRESS, NO DISEASE		2	2

TAXUS (*Taxus*)

CHEMICAL INJURY		7	7
ENVIRONMENTAL STRESS		6	6
INSECT INJURY, SOOTY MOLD		3	4
NO DISEASE, INADEQUATE SPECIMEN		12	12
NUTRITIONAL	- ACID SOIL	1	1
PHYSICAL INJURY		2	2
ROOT ROTS - <u>Phytophthora</u> , <u>Pythium</u>		3	4

TULIPTREE (*Liriodendron*)

ANTHRACNOSE	- <u>Gloeosporium</u>	1	1
CHEMICAL INJURY		3	3
ENVIRONMENTAL STRESS, PHYSICAL INJURY		8	11
INSECT INJURY		1	1
NO DISEASE, INADEQUATE SPECIMEN		9	9
POWDERY MILDEW		5	5

VIBURNUM (*Viburnum*)

DIEBACK	- <u>Phomopsis</u>	1	1
ENVIRONMENTAL STRESS		2	2
INSECT INJURY		3	3
NO DISEASE		2	2
ROOT PROBLEM	- CAUSE UNKNOWN	1	1
ROOT ROT	- <u>Rhizoctonia</u>	-	1

WALNUT and BUTTERNUT (<i>Juglans</i>)				
ANTHRACNOSE - <u>Gnomonia</u>	2			2
CANKER/INJURY	1			1
DOWNY SPOT, LEAF SPOTS- MICROSTROMA, etc	2			2
ENVIRONMENTAL	2			2
INADEQUATE SPECIMEN	2			2
ZELKOVA (<i>Zelkova</i>)				
CANKERS - <u>Cytosporina</u> , <u>Phomopsis</u>	1		1	1

CROP	DIAGNOSIS	CAUSAL AGENT	NO. OF PRIMARY DIAGNOSES	NO. OF SECONDARY DIAGNOSES	TOTAL

GUMMY STEM BLIGHT - <u>MYCOSphaERELLA</u>	2	2
INSECT INJURY	2	2
LEAF BLIGHT - <u>ALTERNARIA</u>	4	4
NO DISEASE, INADEQUATE SPECIMEN	8	8
NUTITIONAL - MANGANESE TOXICITY	1	1
POWDERY MILDEW - <u>ERYSIPHE</u>	1	1
REFERRAL	1	1
SOFT ROT - <u>ERWINIA</u>	1	1
VIRUS - CUCUMBER MOSAIC VIRUS	2	2

EGGPLANT (Solanum)

LEAF SCORCH	1	1
VERTICILLIUM WILT - <u>VERTICILLIUM</u>	2	2

LETTUCE (Lactuca)

DROP - <u>SCLEROTINIA</u>	1	1
GREY MOLD - <u>BOTRYTIS</u>	-	1
LEAF ROT - FUNGAL	1	1
NO DISEASE	1	1

OKRA (Hibiscus)

DAMPING-OFF - <u>PYTHIUM</u>	1	1
NO DISEASE, CHEMICAL INJURY	2	2
VERTICILLIUM WILT - <u>VERTICILLIUM</u>	1	1

ONION (Allium)

BASAL ROT - <u>FUSARIUM</u>	1	1
CHEMICAL INJURY	1	1
ENVIRONMENTAL STRESS	1	1
STEM BLIGHT - <u>COLLETOTRICHUM</u>	1	1

PEA (Pisum)

CHEMICAL INJURY, PHYSICAL INJURY	2	2
LEAF SPOT - <u>ASCOCHYTA</u> , <u>PSEUDOMONAS</u>	1	1
NO DISEASE, INADEQUATE SPECIMEN	3	3
ROOT ROT - <u>RHIZOCTONIA</u>	1	1
VIRUS - PEA MOSAIC VIRUS	1	1

PEPPER (Capsicum)

ANTHRACNOSE - <u>COLLETOTRICHUM</u>	1	1
BACTERIAL SPOT - <u>XANITHOMONAS</u>	10	11
BLOSSOM END ROT	2	2
CHEMICAL INJURY	2	2
CLOUDY SPOT - STINKBUG	1	1
ENVIRONMENTAL STRESS	5	5

PEPPER (cont'd)

FRUIT ROT	- <u>ALTERNARIA</u>	1	2	3
FUSARIUM WILT	- <u>FUSARIUM</u>	6	6	
LEAF SPOT	- <u>PHYLLOSTICIA</u>	2	2	
NO DISEASE, INADEQUATE SPECIMEN		9	9	
NUTRITIONAL		4	2	6
PHYSIOLOGICAL SPOTTING (on fruit)		1	1	2
PHYTOPHTHORA BLIGHT - <u>PHYTOPHTHORA</u>		1		1
ROOT/STEM ROTS - <u>FUSARIUM</u>		4	4	8
	- <u>RHIZOCTONIA, etc.</u>	2		2
SOUTHERN STEM BLIGHT - <u>SCLEROTIUM</u>		5		5
VIRUS	- <u>TOBACCO ETCH VIRUS</u>	1		1

POTATO (Solanum)

AIR POLLUTION	- <u>OZONE</u>	-	1	1
BLACKLEG	- <u>ERWINIA</u>	2		2
EARLY BLIGHT	- <u>ALTERNARIA</u>	1		1
FUSARIUM WILT	- <u>FUSARIUM</u>	2		2
HEAT NECROSIS, JELLY END ROT		2		2
NO DISEASE, INADEQUATE SPECIMEN		7		7
NUTRITIONAL		2		2
ROOT KNOT NEMATODE - <u>MELOIDOGYNE</u>		1		1
ROOT ROT	- <u>RHIZOCTONIA</u>	1		1
SCAB	- <u>STREPTOMYCES</u>	1	1	2
TUBER ROTS	- <u>FUSARIUM, etc.</u>	2		2

RHUBARB (Rheum, Rumex)

CROWN ROTS - <u>RHIZOCTONIA, etc.</u>		2		2
NO DISEASE, PHYSICAL INJURY		2	1	3

SPINACH (Spinacia)

DAMPING-OFF		1		1
NO DISEASE		1		1
ROOT ROT	- <u>APHANOMYCES</u>	1		1

SWEETPOTATO (Ipomoea)

BLACK ROT	- <u>CERATOCYSTIS</u>	1		1
DRY ROT	- <u>FUSARIUM</u>		1	1
ENVIRONMENTAL STRESS		1		1
GENETIC MUTATION		1		1
NO DISEASE, INADEQUATE SPECIMEN		2		2

TOMATO (Lycopersicon)

BACTERIAL HOLLOW STALK - <u>PSEUDOMONAS</u>		6		6
BACTERIAL SPECK - <u>PSEUDOMONAS</u>		1		1
BACTERIAL SPOT - <u>XANTHOMONAS</u>		1		1
BACTERIAL WILT - <u>PSEUDOMONAS</u>		9		9
BLOSSOM END ROT		3		3
CATFACING		3		3
CHEMICAL INJURY		5	1	6
DAMPING-OFF		1		1
EARLY BLIGHT - <u>ALTERNARIA</u>		4	1	5
ENVIRONMENTAL STRESS		4		4
FUSARIUM WILT - <u>FUSARIUM</u>		2		2

TOMATO (cont'd)

INSECT INJURY, OTHER REFERRALS	9	1	10
LEAF SPOT - <u>SEPTORIA</u>	5	1	6
NAILHEAD SPOT - <u>ALTERNARIA</u>	1		1
NO DISEASE, INADEQUATE SPECIMEN	15		15
NUTRITIONAL	7	3	10
PHYSICAL INJURY	2		2
PHYSIOLOGICAL LEAF ROLL	7	1	8
REFERRAL	1		1
ROOT KNOT NEMATODE - <u>MELOIDOGYNE</u>	1		1
ROOT/STEM ROTS - <u>PYTHIUM</u> , etc.	3		3
SOUTHERN STEM BLIGHT - <u>SCLEROTIUM</u>	1		1
SOFT ROT - <u>ERWINIA</u>	1		1
VIRUS - DOUBLE VIRUS STREAK, TMV	3		3

MISCELLANEOUS VEGETABLES

CHEMICAL INJURY	2		2
INSECT INJURY	1		1
NO DISEASE	2		2

Wilcox, WF	Plant Path	4	6	

* The specialist or diagnostician signing the Plant Disease Diagnostic Form was considered the primary diagnostician.

** In some cases more than one specialist was consulted, however, only one name could be entered into the computer database. Therefore, these numbers may indicate fewer consultations than were actually made by the specialist.

***The diagnostician for the Plant Disease Diagnostic Lab.
